

BioPure™ Chlorella Growth Factor (CGF)

Chlorella Growth Factor is a heat extract from Chlorella that concentrates the precious peptides, proteins and other ingredients.

Research on CGF shows that children using it develop no tooth decay and their dentition and maxillary-facial development is nearly perfect. These children report less illnesses, they grow earlier to a larger size with a higher I. Q. and are socially more skilled. There are case reports of patients with dramatic tumor remissions after taking CGF in higher doses.

Chlorella Pyrenoidosa - better absorption of toxins, but harder to digest

Chlorella Vulgaris - easier to digest, but less metal absorbing capability. Chlorella Vulgaris has a lower protein content than Chlorella Pyrenoidosa, but has a thinner cell wall and is therefore better tolerated by people with digestive problems.

Healing benefits: Detoxification, liver protection, constipation, lung and bronchial problems, kidneys, skin conditions, hypoglycemia, colds, flu, strengthens immune system, lowers blood pressure.
